

Complete job search overhaul covering resume, interview skills, and psychological resilience — Action Checklist

PRINT THIS PAGE AND KEEP IT SOMEWHERE VISIBLE

ENGINEER YOUR RESUME FOR ATS FILTERS

- ☐ **Engineer Your Resume for ATS Filters:** Pull five job postings from companies you want to work for and create a two-column document that separates requirements from job description language so you can see exactly what the ATS is screening for.
- ☐ **Engineer Your Resume for ATS Filters:** Extract every keyword from the requirements section of each posting and compare it against your current resume to identify language gaps that are silently filtering out your applications.
- ☐ **Engineer Your Resume for ATS Filters:** Rearrange your resume to include exact keyword matches from the job posting, even if the phrasing feels repetitive, because the ATS cannot understand context and only registers exact or near-exact term matches.
- ☐ **Engineer Your Resume for ATS Filters:** Test your resume by uploading it to a free ATS simulator before submitting anywhere, so you can confirm it passes the initial screen before wasting applications on materials that get silently rejected.

BUILD UNSHAKEABLE INTERVIEW PERFORMANCE

- ☐ **Build Unshakeable Interview Performance:** Construct a modular answer framework that lets you reframe the same core stories for different questions, so you never get caught off guard even when interviewers ask unexpected things.
 - ☐ **Build Unshakeable Interview Performance:** Practice controlling the first impression before you say a single word, because people form lasting judgments within seconds of meeting you and you have very little time to recover from a bad start.
 - ☐ **Build Unshakeable Interview Performance:** Create a rejection analysis system where you document what went wrong after every interview and turn each failure into intelligence that makes your next attempt stronger.
-

- **Build Unshakeable Interview Performance:** Rehearse your answers out loud until they feel natural but not scripted, because reading prepared responses sounds mechanical while unguided rambling sounds unprepared.

PROTECT YOUR MIND DURING THE SEARCH

- **Protect Your Mind During the Search:** Separate actual skill gaps from self-worth damage caused by rejection, because confusing the two makes every setback feel catastrophic when only the skill gaps actually need fixing.
- **Protect Your Mind During the Search:** Track your job search metrics weekly, including applications sent, responses received, and interviews completed, so you can see objective progress even when subjective feelings tell you nothing is working.
- **Protect Your Mind During the Search:** Schedule recovery time between interviews and rejections, because the job search is a marathon requiring sustainable pacing and burning out after two weeks will undo all the improvements you've made.
- **Protect Your Mind During the Search:** Create documented outputs for every section you complete, including completed templates, practiced protocols, and verified materials, so you have tangible evidence of progress that counters the feeling of spinning your wheels.
