

Smart Home Device Frustration — Action Checklist

PRINT THIS PAGE AND KEEP IT SOMEWHERE VISIBLE

AUDIT YOUR NETWORK

- ☐ **Walk through every room in your home with your phone checking WiFi signal strength and document where you get 2 bars or fewer as weak zones:** Walk through every room in your home with your phone checking WiFi signal strength and document where you get 2 bars or fewer as weak zones
- ☐ **Count every device currently connected to your network including phones, tablets, laptops, smart devices, streaming players, and gaming consoles:** Count every device currently connected to your network including phones, tablets, laptops, smart devices, streaming players, and gaming consoles
- ☐ **Run speed tests in the rooms where your most critical smart devices are located to measure download speed, upload speed, latency, and jitter:** Run speed tests in the rooms where your most critical smart devices are located to measure download speed, upload speed, latency, and jitter
- ☐ **Identify which areas of your home have adequate coverage and which areas have dead zones or weak signals that will cause device failures:** Identify which areas of your home have adequate coverage and which areas have dead zones or weak signals that will cause device failures

BUILD A RELIABLE FOUNDATION

- ☐ **Create a separate IoT network in your router settings by setting up a second SSID specifically for all your smart home devices:** Create a separate IoT network in your router settings by setting up a second SSID specifically for all your smart home devices
 - ☐ **Move all smart devices to the new IoT network while keeping your computers, phones, and work devices on the main network for better security and performance:** Move all smart devices to the new IoT network while keeping your computers, phones, and work devices on the main network for better security and performance
 - ☐ **Upgrade to a mesh router system or add WiFi access points to eliminate dead zones that cause your smart devices to lose connectivity:** Upgrade to a mesh router system or add WiFi access points to eliminate dead zones that cause your smart devices to lose connectivity
-

- ☐ **Upgrade your router if you have more than 30 connected devices or are experiencing persistent congestion and reliability problems on your network:**
Upgrade your router if you have more than 30 connected devices or are experiencing persistent congestion and reliability problems on your network

CHOOSE DEVICES WISELY

- ☐ **Check the specs and user reviews for any new device you're considering to confirm it supports local control without requiring cloud account registration or internet connectivity:** Check the specs and user reviews for any new device you're considering to confirm it supports local control without requiring cloud account registration or internet connectivity
- ☐ **Create a cloud-free device shortlist by researching which products can operate fully offline without requiring account registration or server access:** Create a cloud-free device shortlist by researching which products can operate fully offline without requiring account registration or server access
- ☐ **Adjust motion detection sensitivity in your camera app settings to medium or low to reduce false alerts from moving shadows and small animals:** Adjust motion detection sensitivity in your camera app settings to medium or low to reduce false alerts from moving shadows and small animals
- ☐ **Define specific activity zones in your camera app by drawing boundaries around entry points while excluding areas with frequent environmental movement:** Define specific activity zones in your camera app by drawing boundaries around entry points while excluding areas with frequent environmental movement
